

Traffic and weather coverage on satellite radio are very important to my family for the following reasons:

1. Local stations, at best, only provide this information every 10 minutes, covering different areas of the NY region each time. Therefore, to hear traffic for a certain area, one may have to listen for over 30 minutes. The delay often makes this information useless.

2. Stations in the NY area continue to broadcast indecent material that I will not allow my children to hear (and do not appreciate hearing myself). This content includes obnoxious DJs, very explicit sexual content, and songs with violent lyrics. With satellite radio, I do not have to worry about this content.
